CONTENTS

| | |
|--|----|
| 1. Introduction | 9 |
| 2. Taxonomy, Origin and Distribution | 11 |
| 3. Botany | 14 |
| 3.1. Morphological characteristics | 15 |
| 3.2. Cultivars | 19 |
| 3.2.1. Cultivars used for commercial cultivation | 20 |
| 3.2.2. Cultivars with commercial potential but requiring verification | 26 |
| 3.2.3. Cultivars for amateur cultivation | 32 |
| 4. Ecology and Growing Conditions | 35 |
| 4.1. Climate Conditions | 35 |
| 4.1.1 Temperature | 35 |
| 4.1.2 Insolation (Sun Exposure) | 37 |
| 4.1.3 Air Humidity | 38 |
| 4.1.4 Water | 38 |
| 4.1.5 Wind | 38 |
| 4.2. Soil Conditions | 39 |
| 4.3. Conclusion | 40 |
| 5. Crop Care and Culture | 41 |
| 5.1. Establishing the kiwiberry orchard | 41 |
| 5.1.1. Orchard site location | 41 |
| 5.1.2. Soil preparations | 41 |
| 5.1.3. Trellis structure and planting design | 43 |
| 5.1.4. Orchard planting | 47 |
| 5.2. Pruning and Training | 49 |
| 5.2.1. Introduction | 49 |
| 5.2.2. The T-bar system | 49 |
| 5.2.3. Pergola system | 53 |
| 5.2.4. The fan shape and the hedge row system | 53 |
| 5.2.5. Male plants | 55 |
| 5.3. Frost protection | 55 |
| 5.3.1. Introduction | 55 |
| 5.3.2. Types of spring frosts | 56 |
| 5.3.3. Frost versus phenology | 56 |
| 5.3.4. Precautions in the orchard to protect against spring-frost injury | 56 |
| 5.3.5. Frost protection systems | 58 |
| 5.4. Pollination | 63 |
| 5.4.1. Introduction | 63 |
| 5.4.2. Male plants | 64 |
| 5.4.3. Pollination by wind | 65 |
| 5.4.4. Pollination by insects | 65 |
| 5.4.5. Controlled pollination | 66 |

| | |
|---|------------|
| 5.5. Fertilization | 68 |
| 5.5.1. Introduction | 68 |
| 5.5.2. Soil and foliar analyses | 68 |
| 5.5.3. Nutrient demands of young plants | 70 |
| 5.5.4. Nutrient demands of mature orchards | 71 |
| 5.6. Irrigation and water supply | 77 |
| 5.6.1. Introduction | 77 |
| 5.6.2. Water quantity | 77 |
| 5.6.3. Water quality | 79 |
| 5.6.4. Irrigation systems | 79 |
| 5.6.5. Excess of water | 81 |
| 5.7. Pests and Diseases | 82 |
| 5.7.1. Introduction | 82 |
| 5.7.2. Bacterial diseases | 83 |
| 5.7.3. Viral diseases | 84 |
| 5.7.4. Fungal diseases | 85 |
| 5.7.5. Pests | 87 |
| 5.8. Weed control | 90 |
| 5.8.1 Introduction | 90 |
| 5.8.2 Chemical weed control | 91 |
| 5.8.3 Mechanical weed control | 92 |
| 5.8.4 Mulching cover | 92 |
| 5.9. Windbreaks | 94 |
| 5.9.1. Introduction | 94 |
| 5.9.2. Design | 94 |
| 5.9.3. Maintenance | 97 |
| 6. Kiwiberry Harvest and Storage | 98 |
| 6.1. Introduction | 98 |
| 6.2. Kiwiberry ripening | 98 |
| 6.3. Harvesting maturity | 99 |
| 6.4. Harvest and postharvest conditions | 101 |
| 6.5. Sorting | 103 |
| 6.6. Storage | 103 |
| 7. Kiwiberry nutrition and health benefits | 105 |
| 7.1. Kiwiberry nutrition | 105 |
| 7.2. Kiwiberry health benefits and allergens | 107 |
| 8. Propagation | 110 |
| 8.1. Introduction | 110 |
| 8.2. Vegetative propagation | 110 |
| 8.2.1. Cuttings | 110 |
| 8.2.2. Tissue culture | 113 |
| 8.2.3. Grafting and budding | 113 |
| 8.3. Generative propagation | 117 |
| Literature cited | 119 |

About authors

Filip Debersaques is a head lecturer and researcher at Ghent University (Belgium), Faculty of Bioscience Engineering, Department Plants and Crops. He has been doing research on kiwiberry since 2006 and provides technical assistance for kiwiberry growers in Belgium and neighbouring countries. In 2008, he took the initiative to set up an international working group to build up common knowledge and to share experiences and information about kiwiberry. Since then he has been the chairman of the annual meetings that are organized in different countries.

Piotr Latocha is a professor at Warsaw University of Life Sciences – SGGW (Poland), Faculty of Horticulture and Biotechnology, Department of Environmental Protection and Dendrology. He has been doing research on different aspects on *Actinidia arguta* including breeding of new cultivars since 1990s. Since 2010, he has been cooperating with Polish kiwiberry growers, which resulted in the commercial production of kiwiberry. He is also the head of a four-year (2015-2019) research project on the development of commercial cultivation technology for kiwiberry in Poland. Prof. Latocha is the author of many scientific papers and books connected with *A. arguta*.

Jonas Decorte works for the Research and Development Department of BMS Micro-Nutrients NV (Belgium), a producer of foliar fertilizers based on chelated micro-nutrients. Jonas holds a Master's degree of Science in Bioscience Engineering Technology: Agriculture and Horticulture and has been working with kiwiberries since his studies. Both his bachelor's and master's thesis were about kiwiberry. After graduating, he started working at BMS MN on a two-year project in which the fertilization of the kiwiberry was optimized with the help of foliar nutrition. He's a member of the Ghent University kiwiberry growers association in Belgium and the Netherlands.
